Immunizations

Preventing Disease, Death and
Disability through Vaccination

*The current childhood
immunization schedule
prevents 42,000 deaths and
\$14 billion dollars in
healthcare cost.*

Ontario County Public Health

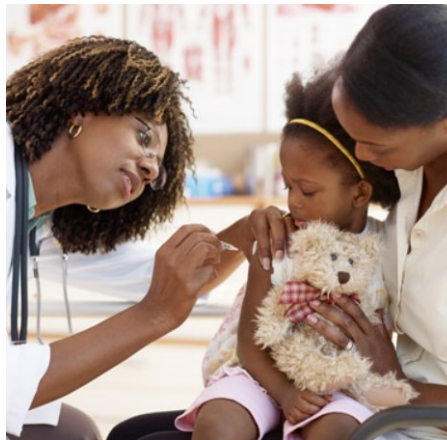

Vaccines continue to be named among the top ten achievements of public health. Vaccines reduce disease burden, hospitalization, and healthcare costs associated with vaccine preventable disease.

Ontario County Public Health works with schools, daycares and migrant programs to be sure that all residents of Ontario county have an equal opportunity to be vaccinated. Immunizations clinics are offered to county residents on a weekly basis at the Ontario County Public Health Immunization Clinic.

Vaccines for Children

Ontario County Public Health offers 17 different childhood vaccines to children under the age of 19 years through participation in the Vaccines for Children (VFC) program. The VFC program is a federal program established to provide vaccines to uninsured or underinsured children. Children with Medicaid insurance are often serviced by the VFC program ensuring that our most vulnerable population is fully immunized.

Vaccines for Adults

Many adult vaccines are now available to uninsured and underinsured populations through a state supported program called Vaccines for Adults (VFA). Several types of vaccines are available to service the migrant and seasonal farm worker populations. Finally, MMR vaccine is available to residents going to college. As Public Health Law in NYS requires these students to have proof of immunity to measles, mumps and rubella.

The Immunization Program works closely with our Emergency Management program to ensure that that appropriate vaccines are available to the public during emergencies.
